Github | **MERN Project** | App

Goal: This application advertises Low Environmental impact holiday accommodation. The site promotes Eco-friendly getaways and provides information on each type of accommodation, a register and sign up, features gallery of photos and enquiry options.

My responsibility: Developed the Full stacked Mern app using React, MongoDB, Express, Node. Undertook thorough responsiveness testing, user testing and presented the final app for user acceptance.

Future Improvements: Research options for backend date implementation potential fixing form issues and credit card down payment options.

Github | **Project** | App

Goal: This application will display statistics and information from the NBA by using the NYT Article Search API and the BallDontLie API, integrating data from the latter to search for news articles on the sports desk.

My responsibility: Designing and development front-end experience. Worked with a team to build the back-end functionality. Undertaking thorough responsiveness tests, user testing and presented the final app for user acceptance.

Future Improvements: Develop a similar app with React for other sporting codes eg: soccer.

Github | **Project** | App

Goal: Develop a website that small-to-medium enterprises could advertise their product based business. Businesses have taken a huge blow as COVID-19 has bought about a recession, forcing people to reduce their expenses, the Business Advertisement Portal is a free service to help SME's.

My responsibility: Designing and development of the front-end experience. My focus was to design an application that was mobile friendly, highlighting the products and sales prices through the website. The functionality included the ability for the SMEs to upload their product details, photos, web link, varying pricing and product search function.

Future Improvements: Serving SME's to get feedback on the applications functionally, typography and graphic design.
